

# Sustainability in the financial sector – LPA's vendor rating tool solution

We deliver an individual bottom-up approach to rate ESG-performance for proving sustainable business values represented not only by the company itself, but also by stakeholders and suppliers.

## STATUS QUO

During the last years the topic sustainability subsumed by the initials „ESG“ (Environmental, Social, Governance) has become more and more important as values in society are changing continuously and people as much as investors think increasingly about the impact of their investment process and decisions.

Companies have to **explain to their stakeholders** their individual ESG footprint along with the value chain and measures they already take or will take, in order to improve. Additionally, international institutions e.g. the **UN (United Nations)** or **WEF (World Economic Forum)** have taken up these discussions **on a society level** in order to provide guidance to help investors, companies, issuers and project promoters to navigate the transition to a low-carbon, resilient and resource-efficient economy.

## Our Target Operating Model

Our AI based tool provides you a real-time ESG rating evaluation by only one click, taken into account the most recent sources to calculate the rating and reflect the actual state of your vendors' engagement.

One-click-to-ESG-rate-factor

Flexible dashboard for statistical overview provision

Risk minimization by regularly checking vendors' ESG-ratings

Levering your bargaining power for regular contract negotiations or prolongations

Evaluation on regular terms to track the in- or decreasing development

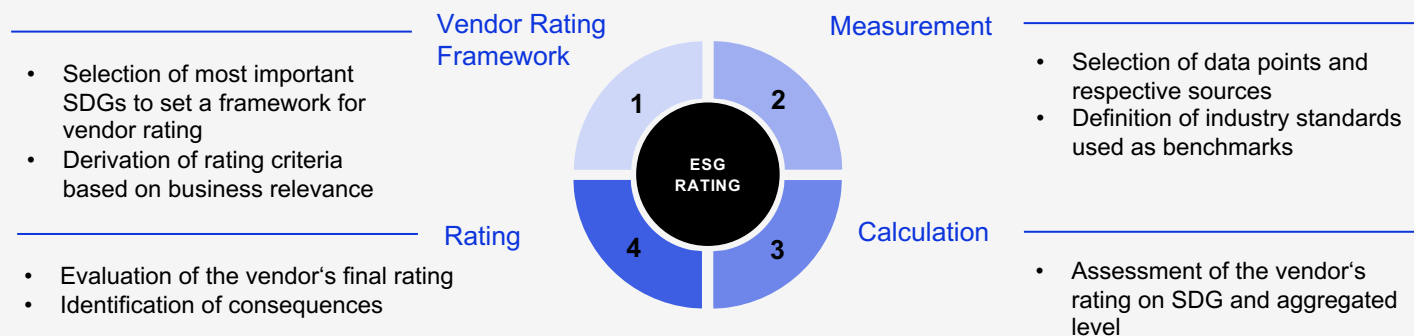

Three layer-level for measuring KPI and single criteria based on E,S and G

Share the ESG rating with important stakeholders to prove and integrate sustainability throughout your organization

# The idea of an ESG vendor rating

## Our service functionalities

### DATA BASE

Data base reflects vendors and cluster of vendors, industry standards per rating criterion, data points and search results as well as transformed rating results

### WEB CRAWLER

Web crawler browses the world wide web searching for data points

### FRONT END

Determination of the essential, necessary initiatives to achieve ESG compliance (TO-BE)

### REPORT ENGINE

Report generated periodically or on demand in different document formats

### GUI

GUI used to adjust raw data in data base

## Your advantages

Experienced experts in the ESG context

Innovator and catalyst for successfully developing artificial intelligence application

Our agile way of working strengthens the movement away from rigid processes

As CapTech we also support with the implementation

## LPA – Your ideal partner

LPA delivers the whole client's value chain: With its highly specialized ESG subject matter experts as well as the far-reaching artificial intelligence application know-how of DeepTech "AAAccell" LPA Group as the globally leading CapTech player offers its clients a holistic project approach, to handle all of your technological aspirations.
