

Support Business Case & Strategy

Ready to dive into new technologies and products?

We will guide you in the initial steps of implementing relevant products and services within the broad spectrum of DLT by analyzing use cases and their cost-benefits for your business model in the current market, as well as the associated technological and regulatory environment.

Challenges

Identification of Use Cases

The offering of digital assets has progressively evolved in recent years. There are currently numerous use cases, but only some of them are particularly suitable for the business models of the respective financial institutions.

Technology Screening

Products and services can be implemented using various technologies, which can have a significant impact on the complexity and cost of implementation.

Compliance Screening

New business cases must be embedded within an (existing) complex and diverse regulatory environment, which should be considered and analyzed in the initial phases.

Process Chain Conception

Integrating new processes into existing process landscapes is essential for successfully implementing use cases based on the chosen technology and legal requirements.

Why LPA?

Expertise

Our consultants have extensive DLT project experience to support initial business analyses and strategy development through to the subsequent regulatory and technical steps.

Positioning

Our DNA lies in capital markets at the intersection of business and IT, and we provide a comprehensive contribution with a focus on the current business, regulatory, and technological market environment.

Your Perfect Partner

Our unique combination of business experts, data scientists, and software developers, paired with deep knowledge of banking processes, makes LPA the ideal partner to realize your company's full potential.
