

Support in the Licensing Process

Completion of the First Major Milestone for New Services

Licenses are a key component of the entry process into new market segments. We offer support with various aspects of applying for the necessary licenses (such as crypto custody service license, crypto registrar license, crypto trading license) to enable the regulatory entry of new DLT products and services.

Challenges

Requirements Analysis

To obtain a new license, numerous requirements and guidelines must be followed. For a successful application, it is necessary to analyze the legal details and set clear objectives.

Gap Analysis

In order to meet the requirements for a license, the current processes must be thoroughly reviewed to determine which existing processes need to be expanded and which new ones need to be introduced.

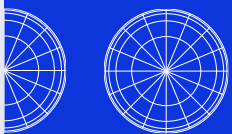

Documentation

The preparation of comprehensive documentation for the application is a particularly labor-intensive part, but it is ultimately crucial for timely approval.

Integration into the Project

The requirements of licenses are closely linked to the business concepts as well as the technical implementation. Connecting the project streams is essential for a successful go-live.

Why LPA?

Expertise

Our consultants have extensive DLT project experience in assisting our clients in the (successful!) application for licenses to offer new DLT services.

Positioning

Our DNA lies in capital markets at the interface between business and IT, and we have years of experience in the practical implementation of all major regulations within banking processes.

Your Perfect Partner

Our unique combination of business experts paired with deep know-how of banking processes makes LPA the optimal partner to realize your company's full potential.
